

Submission Procedures

Submission Format and Guidelines

- Only submit the **java files**. Do **not** submit any other files, unless otherwise instructed.
- Please do not put your .java files in folders or zip files (I receive them in individual folders already)
- Please don't submit your project files from Eclipse/BlueJ etc or your .class files.
- To submit the assignment, upload the specified files to the appropriate **Assignment 1/2/3/4** folder on the course website.
- Please submit an Honesty Declaration (I've provided a simple text editable version) with each assignment

Formatting and Standards.

- Assignments must follow the **Standards.java** document published on Moodle/Learn.
- To be eligible to earn full marks, your Java programs must compile and run upon download, without requiring any modifications.
- Please use clear and descriptive variable names and comment your work. I will remove marks for a lack of comments.

Submission FAQs:

- After the due date and time, assignments may be submitted but will lose **2% of the marks per hour** late.
- If you submit a question multiple times, only the **most recent version** will be marked.
- If you do not complete the assignment, please include a README.txt file that explains what phase you did complete so I can test that. Providing details on what is not working may be helpful as well.
- Markers are not required to debug or in any way fix your code.
- If you cannot complete the assignment because of extenuating circumstances, please speak to me (or an ICM Student Advisor if you are an ICM student) as soon as possible. Even if you have a valid reason, you can't come to me a month later as ask for exemption.

Academic Dishonesty

- Code your assignments independently. We analyze and compare all submitted assignments to each other, and **pursue academic dishonesty vigorously**.
- These assignments are your chance to learn the material for the exams. You are only hurting your chances of future success by not doing them yourself.
- You must write your program yourself. No copying of code. It is important you learn the material and cheating will not help you achieve that goal.
- If you are stuck you can contact me or come to office hours.

Tips:

- Start early so you have time to ask questions, get clarification and sleep on tricky problems.
- Comment early and often, it will help you stay organized.
- Follow the Standards. There are substantial marks available simply for good organization and formatting.
- Don't be afraid to ask questions.
- Don't leave the submission procedure to the last minute! It may take some time to get it sorted out.
